1.Project Overview

SMART Contact Manager is a backend application used to manage and organize contact information in a centralized system.It helps users store,edit,search and delete contacts efficiently. The system is build using node.js,Express.js and MongoDB.

2.Objectives

*Provide secure user authentication

*Allow CRUD operations for contacts

*Store data using MongoDB

*Provide fast search and filtering

*Develop scalable REST APIs

3.Target Users

*Students

*Freelancers

*Small business owners

*Professional managing networks

4.Technologies Used

Node.js:JavaScript runtime for backend

Express.js:Framework for REST APIs

MongoDB:NoSQL database

Mongoose:ODM for MongoDB

JWT:Authentication system

Postman:API testing tool

5.System Architecture:

*Client Layer – Sends API requests

*Application Layer – Node.js and Express

*Database Layer – MongoDB

6.Core Features

* Users Registration

*User Login

*JWT Authentication

*Create Contact

*View Contact

*Update Contact

*Delete Contact

*Search Contact

7.Roles and Responsibilities

*Register account

*Login to system

*Add contacts

*Edit contacts

*Delete contacts

*Search contacts

8.Database Design

Users Collection: id,name,email,password,createdAt

Contacts Collection: id,userId,name,email,phone,notes,createdAt

10. Project Setup

1.Install Node.js

2.Initialize project with npm init

3.Install dependencies

4.Create server file

5.Connect MongoDB

6.Create API routes

7.Test APIs with Postman

11. Conclusion

This project demonstrates backend development using Node.js Express and MongoDB to create a secure API-based contact management system.
